The Acker-Stone Difference

At Acker-Stone Industries, Inc., we pride ourselves in leading the way in technological advances in the interlocking concrete paver industry.

We carry the largest variety of shapes and colors in both standard and permeable concrete pavers. Custom colors and designer textures are available in a variety of finishes including tumbled, shotblast, grind and hammer finishes.

If you are looking for a quality product accompanied by excellent customer service at competitive prices, look to Acker-Stone.

About our Standard and No Fee Production Products

Standard Products

Acker-Stone's Standard Product list includes some of our most popular options at competitive prices. Pavers are typically available for immediate shipment.*

No Fee Production (NFP)

Acker-Stone's No Fee Production list gives our customers more flexibility at no additional cost. Standard finished pavers are generally ready for shipment in one to two weeks. Tumbled finished pavers are ready for shipment in two to three weeks.*

All products in our Standard Products, No-Fee Production, and Wall Collection are available as through mix colors.

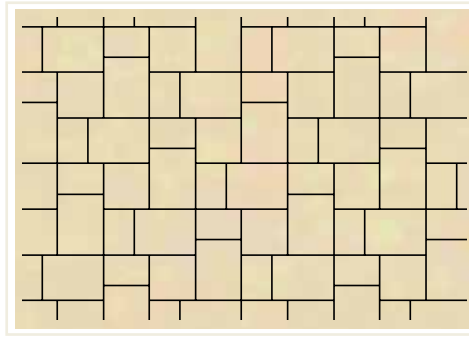

*Availability may vary. Please call for details.

Our Standard Product list & No Fee Production list are routinely updated. Call, email or visit www.ackerstone.com for the most up-to-date product list.

Product Information

Color Blends

A color blend is a combination of two, three or more colors mixed in unequal amounts for an appearance that is truly unique. When choosing a blend, it is important to keep in mind that some of the pavers will be dominant in one of the colors and some will be a combination of the colors that are in that particular blend. Color blends should be avoided on small projects. A paver installation using a color blend requires special attention to assure proper field blending. During the installation, pavers should be pulled from multiple pallets at a time. For best results, choose an ICPI certified installer.

Color Variations

As in all natural materials, color in paving stones has inherent variations. Paver color is affected by the variances in the raw material, climatic conditions and variations in print reproduction. The colors shown are approximate representations. Verify colors with actual samples of product prior to ordering material. Exact color matches cannot be guaranteed.

Efflorescence

Efflorescence is a whitish powder-like haze that may appear on the surface of the pavers. Efflorescence, a deposit of white salts consisting of mostly calcium carbonate, may appear randomly or in certain areas. Efflorescence is a normal cement-by-product and will usually wash and wear away with time and exposure to the elements. Efflorescence does not affect the structural integrity, performance or durability of concrete pavers. There are cleaners available that can remove efflorescence. For more information, visit www.icpi.org.

Use Constitutes Acceptance

Your installation of Acker-Stone products implies you accept the product “as-is”.

Contact your dealer and/or Acker-Stone immediately if the delivery is not what you ordered: After installation, no returns will be authorized. No request for reimbursement or reinstallation will be considered.

Unwrap Immediately

Rain, water and/or moisture infiltration could affect the appearance of the product if it is left wrapped and exposed to the weather.

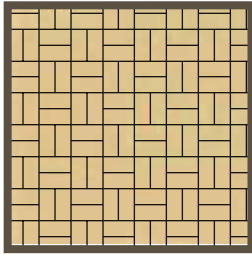

Cleaning

For cleaning and maintenance information, visit www.icpi.org.

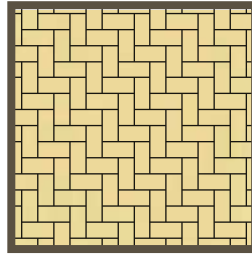

Sealing

Concrete is a porous material. Concrete sealers will help protect against spots and blemishes. Test your product with sealer on a small area before applying throughout. Acker-Stone accepts no responsibility for surface changes after sealers have been applied.

Grind & Shot Blast Finish

Through Mix

Through Mix

Through Mix pavers have color throughout the entire paver. Acker-Stone has the ability to manufacture solid colors or blends, with up to four colors in a single paver. The face of the paver is more coarse in nature than that of a Face Mix paver. It's important to note that with Through Mix pavers the shades and depths of colors will vary greatly.

Grind & Shot Blast Finish

Face Mix

Face Mix

The application of a layer of fine aggregate, cement and color to the top surface of a concrete paver is called a Face Mix. This process provides rich, vibrant colors, a smoother more refined texture and greater abrasion resistance.
